AUTHOR: Yushkevich, A. A.

TITLE: On the differentiability of the transition probabilities
              of a homogeneous Markov process with denumerable number
              of states

PERIODICAL: Referativnyy zhurnal, Matematika, no. 11, 1961, 6,
              abstract 11V24. (Uch. zap. MGU, 1959, vyp. 186, 141-159)

TEXT: It is proved that homogeneous Markov processes with
countable number of states are strictly of the Markov kind. This
property is used in order to prove that the transition probabilites
$p_{ik}(t)$ for $t > 0$ possess finite derivatives, if one of the limits

$$\lim_{t \to 0} \frac{1-p_{ii}(t)}{t}, \quad \lim_{t \to 0} \frac{1-p_{kk}(t)}{t}$$

is finite. If both of the limits are finite, then $p_{ik}(t)$ is absolutely

continuous. An example is constructed, where $p_{ik}(t)$ possesses an infini-
te second derivative.

PHASE I BOOK EXPLOITATION   SOV/1366

Istoriko-matematicheskiye issledovaniya, Vyp. 11 (Research in Mathematical History, Nr 11) Moscow, Fizmatgiz, 1958. 792 p. 5,000 copies printed.

Eds. (Title page): Rybkin, G.F. and Yushkevich, A.P.; Ed. (Inside book): Konoplyankin, A.A.; Tech. Ed.: Murashova, N. Ya.

PURPOSE: This book is intended for mathematicians and others interested in the history of mathematics, and may serve as the basis for a suitable university text on the history of mathematics, thereby filling the most serious gap in Soviet mathematical literature.

COVERAGE: This book contains reports made by members of the section on the history of mathematics at the Third All-Union Mathematical Congress which discussed problems of the history of mathematics and various articles on the significance of the history of mathematics

Card 1/8

Research in Mathematical History (Cont.)   SOV/1366

for mathematics itself and for the other sciences. There are
also four articles on the history of mathematics in Czechoslovakia
and Rumania, an article on the investigation of the algebraic
roots of differential calculus in connection with a study of the
mathematical writings of K. Marx, and an article on the work done
on negative numbers by the Arabian mathematician, Abu-l-Wafa. A
series of articles on various texts and documents connected with
the history of mathematics, including a translation of the
treatise De Configuratione Qualitatum by N. Oresme and two articles
concerning it, concludes the book.

PURPOSE: This book is intended for mathematicians and historians
of mathematics interested in Soviet contributions to the field.

COVERAGE: This book is Volume I of a major 2-volume work on the
history of Soviet mathematics. Volume I surveys the chief con-
tributions made by Soviet mathematicians during the period 1947-
1957. Volume II will contain a bibliography of major works since
1917 and biographic sketches of some of the leading mathema-
ticians. This work follows the tradition set by two earlier
works. Matematika v SSSR za pyatnadtsat' let (Mathematics in
the USSR for 15 Years) and Matematika v SSSR za tridtsat' let
(Mathematics in the USSR for 30 Years). The book is divided
into the major divisions of the field, i.e., algebra, topology,
theory of probabilities, functional analysis, etc., and con-
tributions and outstanding problems in each discussed. A list-
ing of some 1800 Soviet mathematicians is included with refer-
ences to their contributions in the field.

ACCESSION NR: AP4046297   S/0203/64/004/005/0965/0968

AUTHOR: Gul'medov, Kh., Yushkevich, E.S.

TITLE: Structure and diffusion of meteor trails from photographic observations

SOURCE: Geomagnetizm i aeronomiya, v. 4, no. 5, 1964, 965-968

TOPIC TAGS: meteor, meteor trail, meteor trail diffusion, atmospheric turbulence, meteor trail structure

ABSTRACT: This paper presents the results of photometric measurements of the blackening density of successive photographs of stable meteor trails, observed on 21 October 1961 Astronomicheskaya observatoriya im. V.P. Engelgardta (V.P. Engel'gardt Astronomical Observatory) at Kazan'. Two trails were investigated. Partial results were previously published by the author (Geomagnetizm i aeronomiya, 1963, 3, No. 2, 309; Byull. VAGO, 1962, No. 32(39)). The photographs were taken with a camera with a "Yupiter-8" objective (f = 1:2, F = 50 mm). Seven or eight successive negatives were obtained for each trail. Measurements of the blackening density of the image of the trails were made using a MF-4 microphotometer with a magnification of 20. Information is given on the linear dimensions of the trails. It was found that the structure of the

Card   1/5

ACCESSION NR: AP4046297

trail in the second exposure was patchy, consisting of individual condensations. The largest condensations were formed at the beginning and end of the trail. The structure of the trail changed by the third exposure: the condensations in the middle part of the trail merged, only the large condensations at the beginning and end of the trail remaining. There was also a shifting of isophots from exposure to exposure. Figures 1 and 2 of the Enclosure show that with increasing height there is a change in both velocity and the coefficient of diffusion of the trails. These values correlate well with the variation in velocity of drift of the trails. There is an interrelationship between the structure of the trails and their rates of diffusion and drift; this can be attributed to the influence of atmospheric turbulence on the formation and development of trails. It is also shown that attenuation of the trail occurs not only as a result of diffusion, but also due to other phenomena which considerably accelerate this process. Brightness of the trail is also variable with height, as shown by Fig. 3 of the Enclosure. Orig. art. has: 3 formulas, 4 figures and 1 table.

Preobrazhenskiy, B. K., Yushkevich, G. F.

TITLE: Positron Spectra of the Dysprosium Fraction (Spektry pozitronov disproziyevoy fraktsii)

PERIODICAL: Izvestiya Akademii Nauk SSSR, Seriya Fizicheskaya, 1958
Vol. 22, Nr 2, pp. 2o8-21o (USSR)

ABSTRACT: The mentioned dysprosium fraction was here obtained by separation from the tantalum target, which was irradiated by protons with an energy of 66o MeV. In this connection it is stated, that no data can be found in publications on the dysprosium isotope with a half life of 2o hours. Dy^{157} was ascribed to the eighth period (reference 2). From reference 3 it can be seen, that another Dy^{155} exists with a half life of 1o hours. In order to determine which isotopes are contained in the here obtained preparation, its conversion spectrum was investigated, which resulted in the determination of 11 peaks of conversion electrons. 6 of these possessed the same half life of 11 ± 2 hours. The energy of the electrons amounted to $18o \pm 1o$, $27o \pm 15$, $32o \pm 2o$, $4oo \pm 25$, $465 \pm 3o$ and $61o \pm 3o$ keV. It was assumed, that these are K-electrons, possessing

Card 1/3

Positron Spectra of the Dysprosium Fraction   48-22-2-14/17

the transition energies 230, 320, 370, 450, 515, and 660 keV.
Such transitions "apparently" correspond to Dy^{155} or Dy^{157}.
The ratio of the number of positrons and of the number of
conversion electron transitions with $h\nu$ = 515 keV was establi-
shed to be 37,5. A half life of 4,7 days and energies of 98,
112, 132 and 162 keV here corresponded to the four groups of
conversion electrons. A comparison with the conversion
spectrum of the dysprosium fraction as given in reference 3
permits to assume, that in this case it is concerned with the
lines k-148, K-162, K-182 and K-210, which occur in the decay
of Tb^{155} (the first three of them), which also pertains to the
decay of Dy^{155} and Dy^{157}. Concerning the 2o hours decay period
which was found in this investigation in the dysprosium fract-
ion, it is stated here, that its origin remained unclear. Con-
cerning this it is remarked, that in the measurements of the
terbium fraction on a ketron (reference 4) positrons from a
decay with a half life of 18 hours and a limit energy of
~2800 keV were observed, which is near to the found half li-
fe of ~2o hours. For this reason it is assumed, that the re-
spective positron spectrum refers to the isotope Tb with a half
life of 18 hours. There are 4 figures and 4 references,

Card 2/3   3 of which are Soviet.

TITLE: Investigation of the effect of neutron and gamma irradiation on the optical density of glasses used in some photomultipliers

TOPIC TAGS: photomultiplier, gamma irradiation, neutron irradiation, irradiation effect

ABSTRACT: An investigation was made of the effect of gamma and neutron irradiation on the optical density of glasses used for FEU-13, FEU-14, FEU-52, and FEU-56 photomultipliers. Photocathode glasses 40 and 70 mm in diameter and 1 and 2 mm thick, respectively, were used as specimens. Gamma irradiation was conducted in cobalt installations with dose rates of 100 and 1 r/sec. Neutron irradiation was conducted in the vertical channel of an IRT-2000 reactor with integral fluxes of 10^{10}, 10^{12}, 10^{14}, and 10^{16} neutrons/cm^2. A gamma-irradiation dose of the order of 5×10^4 r at an average quantum energy of 1.25 Mev increased the optical density of glasses approximately 1.05 times. Gamma doses of 10^7 r and higher brought about greater changes. Neutron irradiation also darkened the glasses, although the darkening was uneven. The darkening can be linked to the appearance of F-color
